ZYMOX Enzymatic Dermatology Products for Dogs & Cats Announces NEW Product line for Horses

NEW! From the makers of **ZYMOX**® Enzymatic products for dogs & cats, is the new **ZYMOX** Equine Defense products to aid in the management of common, yet typically hard to manage skin, coat and hoof conditions due to bacteria or fungus. These products utilize the patented LP3 Enzyme System to promote healing without antibiotics, harsh chemicals or astringents. Non-toxic. Non-oily. Features Skin & Coat Wash, Skin Guard, and Topical Spray and Cream. Visit Pet King Brands at booth #8102 to learn more about these products for equine use as well as the dermatology and oral care line for dogs and cats.

ZYMOX® has been used by veterinarians since 1998 and is now available through select retailers. The popularity of the products has grown because of the demand for alternatives to antibiotics for pets suffering from the complications of allergies, such as itchy, irritated or infected ears and skin. In addition to the popular line of enzymatic dermatology products is also the **ZYMOX** Enzymatic Brushless Oral Care line for pets with managing **DRY MOUTH** conditions, much like people, which can cause bad breath and lead to periodontal disease. To learn more, visit www.zymox.com
